1. (Currently amended) A method for providing motion information from a compressed bit stream associated with video information to a client, the method comprising:
 - identifying motion information associated with a compressed bit stream;
 - processing motion information to generate processed motion information, including:
 - determining motion information coherence by dividing a magnitude of averaged motion vectors by an average magnitude of motion vectors, indicating wherein a motion vector indicates a direction of motion included with the video information; and
 - determining motion information magnitude based at least in part on the average magnitude of motion vectors; and
 - providing the processed motion information to the client, wherein providing the processed motion information allows the client to identify video information in the bit stream.
